

# ABG NEWS

April 2007

Due to the overwhelming success of our first Colchester Tornado T10M lathe we have now taken delivery of our second machine.

Supplied with a 3000rpm, 26kW Fanuc main spindle and large 305mm chuck (80mm bar capacity) giving a capacity of 350mm max turned diameter and 600mm turned length, 12 driven tool turret with VDI40 tooling system, fully programmable C axis and disc brake spindle clamping and a powerful 5.5kW motor for both radial and axial milling, drilling, boring and tapping.

The majority of jobs scheduled for the T10M's will come off complete where previously they had to be scheduled and loaded on to a milling machine for secondary milling operations.

At ABG we are constantly looking to build for the future by improving our performance and streamlining our processes. This new addition will enable us to complete jobs quicker and compete for bigger contracts

If you have a requirement or application which you would like us to look at please contact our sales office below or visit our new website, [www.abgrp.co.uk](http://www.abgrp.co.uk), for further information on the products, materials and services offered by ABG.
